The digital microscope is the innovation of microscope. It broke the functional high point of microscope and created an epoch in microscopy! Through redesigning the light path of microscope, establishing the CMOS sensors into the trinocular tube of microscope head, receiving the image through CMOS, then sent to the computer in the form of digital signal, and re-produced image in real on the computer monitor. Digital technology applied in microscope, brought the much wide application of the microscope. The specially developed image measurement software for digital microscope makes the image clear at a glance for the users. The displayed image on the computer monitor is increase hundred or thousand times than the image you see in the eyepiece, and this makes the observation of the specimens much

SP 2000UV/UVPC Visible Spectrophotometer

Can you believe? An UV-Vis spectrophotometer costs less than ten thousand, but with power on self-testing, automatic wavelength calibration, light source auto- switching, PC controlled, etc. In the past, it might cost several ten-thousand even decuple with these advanced functions.

SP-2000UV UV-Vis spectrophotometer takes use of high precision sine mechanism as a wavelength driver. Program control, wavelength accuracy, and the linearity over the full wavelength are obviously better than those of the congener instruments in which gear and rack is used as a wavelength driver, and a gauge dial is used for wavelength display.

Main testing interface

Upgraded SP-2102UVP UV-Vis spectrophotometer uses 6.4 inch graphic type LCD with large screen that substitutes previous simple display mode of character type in which new functions, such as spectral scanning, quantitative analysis, ect. are included. The sample's absorbance, transmittance, or concentration is real-time recorded. The spectral scanning curve and standard curve can be drawn, and the testing parameters can be shown in list, for example, the wavelength, light source energy, on-off status of the light source, operating suggestions, and so on. The human design fits the operating custom of most users.

SP-2102UVP UV-Vis spectrophotometer supplies diversified testing mode, mainly about:

Photometric analysis: absorbance, transmittance, concentration measurement.

Quantitative analysis: measurement with slope and intercept ($C=K \times \text{Abs.} + B$), measurement with standard curve.

Spectral scanning: whole wavelength range scanning, section of the wavelength range scanning, peak and valley identifying can be carried out.

Main menu: The interface is clear and intuitionistic designed, and with function key suggests, user can easily enter into appointed interface.

Quantitative analysis

By inputting the standards' concentration and measuring each absorbance, user can easily establish a fitted curve of 10 standards. The system automatically numbers and lists each sample's absorbance and concentration. User can pick up the figure of standard curve, linear equation, and correlative coefficient the system automatically calculated, and evaluate the curve's linear fitting effect. The established standard curves can be stored, printed out or recalled from memory for measuring unknown samples. Moreover, user can directly input the fitted parameters, such as the slope, intercept, etc, to quickly establish standard curve without inputting the concentration values of standard samples.

S23A Visible Spectrophotometer(Tube & Cuvette)

S23A is special for Environmental Protection Department and Education Department, Can use testing tubes or cuvette to make measure

Features:

- * Using universal $\phi 12 \times 0.4 \times 100$ mm testing tubes or cuvette to make measure directly.
- * Whole aluminum metal alloy die-castings.
- * Pre-aligned halogen-tungsten lamp, offer ease of use and simple maintenance.
- * Built in SCM technology, auto 0%, auto 100%, error-free T/A transformation.
- * Transmittance test, absorbance test, concentration factor setting and concentration direct readout functions.
- * Analysis with data processing software.

How to select the test tube

Generally the round test tube is not for optic purpose unless it is pre-checked strictly.

1. Check size. (The size should be $\phi 12 \times 0.4 \times 100$ mm)
2. Check the surface of tube. (It should be no bubbles, no scabs, no thread like things.)
3. Warming instrument and set the wavelength at 360 nm.
4. Pour some pure water into tube and insert it to the test tube well in sample apartment. Then put some mark on the tube opposite the white mark at the instrument.
5. Put the other test tube into instrument one by one and get the readout for everyone and put mark at everyone. We can divide them in many groups. In each group the differential of readout for every tub is less then $\pm 0.02A$.
6. We can use tubes in same group for blank, sample, and standard solution needn't check the tube every time.

Characteristics

1. Brand-new designed microcomputer temperature control system of world advanced control technology. High accuracy of temperature control (optimum: $\pm 0.05^{\circ}\text{C}$), high reliability and anti-interference.
2. Control and operating parameters (including for detectors) set up by the keyboard. Self-diagnosis system, power-fail protection, file storage and call, limited temperature setting. Accurate display of setting and actual value of temperature control of each path, bridge current of TCD, sensitivity of FID, retention and analysis time.
3. Four paths of independent control sections: column oven, sample injector, detector and thermal conductive pond.
4. 5-ramp programmed temperature rising control. Auto-drop of temperature of column oven (auto-opening the door behind the oven) to a fast cooling.
5. Dual FID provided with options of GC112 A-TCD, GC112A-ECD, GC 112 A-FPD and GC112A-NPD, gas sampling valve, transformation oven, absorber and pyrolysis absorber available for selection. Two detectors can be installed at the same time with high sensitivity. Short time to be stabilized and easy to clean and install nozzle.
6. Packed column and capillary column (0.53 large diameter or small diameter) can be installed easily including a complete set of split sampling connector and tailing connector to be installed free of charge. Optional 0.53mm large diameter capillary direct sampler is available for choice. 7. Analysis can be conducted in packed or capillary column with multiple sampling methods.
8. Packed column: on-column sampling, instantaneous vaporized sampling and gas sampling.
9. Capillary column: split sampling and 0.53mm large diameter capillary direct sampling.
10. Construction of dual gas path, dual sample injector and dual packed column system can effectively avoid baseline undulation and drift in real time and facilitate programmed temperature rising analysis. Accurate and scaled type gas path control valves will provide a high repeatability and stability.
11. Advanced functions: auto ON/OFF temperature control system, permanent data storage, file storage and call and over-temperature protection.
12. Large volume column (300x280x270) can hold capillary column and dual packed column. Built-in heating filament structure is in favor of quartz capillary analysis. 13. A complete set of accessories including purifier, pressure-reducing valve, gas path tube, wrench and tools, injection needle and connectors of all kinds are provided free of charge and are ready to connect with supply-air system prepared by users.

BPZ Vacuum Drying Oven

Vacuum Degree LED Display Controller

Under the vacuum condition, you can obtain:

1. The vacuum environment greatly reduced the liquid point which needs to drive out, therefore the vacuum is dry may with ease apply to the heat sensitivity material.
2. For the sample that does not be dry easily, such as powder or other pellet form sample, using vacuum
3. Use more safety--Under vacuum or inertia condition, eliminate oxide completely to meet the possibility of hot explosion.
4. With dependence air cycle ordinary drying oven compare, powder form sample will not be flowed, air blows or moves.

Though, vacuum dry technology has more numerous advantages, but it is stricter that the workmanship of drying oven compares with the relatively complex requirement for product quality with ordinary oven, our company use accurate temperature control technical and advanced manufacturing process, so our products will satisfy your needs.

The overall vacuum cycle controller can supply programmable vacuum cycle & reduce the drying time. You can only set highest and lowest vacuum value, such as 50Pa & 900Pa, and set cycle times is 6 times, machine will auto control the vacuum & cycle times. Along with each cycle go on, humidity reduces constantly, dry speed accelerates obviously. Maximal cycle times are 99 times.

Summary of Functions:

1. Cuboid chamber maximizes the effective cubage. Microprocessor controller for temperature ensures a precise and reliable control.
2. Dual-layer bulletproof toughened glass door ensure absolutely clear observe on objects in chamber.
3. Shutting extent of oven door is adjustable. Closed-cell silicon gasket ensures a high vacuum degree in oven.
4. The chamber is made of stainless steel (or wire-drawing sheet) which allows a durable service and cleaning easily.
5. Store, heating, testing and drying are all in an environment without oxygen or filled with inert gases, which ensures no oxidation.
6. Minimum heating time is over 50% less than that of traditional vacuum drying oven.

Vacuum LCD Display and Control

Vacuum drying oven adopts the digital technical control vacuum degree of simulated engineering science. "Control By Hand" becomes historical long ago. The products has full automatic LCD Display controller to control electromagnetism valve. You can adjust the vacuum from 1.0E5 Pa to 1.0E-1 Pa. Control precision is 1%. Vacuum sensor is located in different position of import and export that can guarantee stabilize pressure value, not be bullied the influence that supply most steady pressure value to the operation manual.

The unit is second.

- II. Main technical features:
- 1. The instrument is made of copper and it is about 100 ml. Its specification and the roughness of its inner wall can meet the stipulations of GB/T1723. Its bottom is a stainless steel effuse hole.
 - 2. Correction coefficient K: Multiply the measured viscosity of the instrument with the correction coefficient K to get the specific viscosity of the instrument. The correction coefficient K should be in the range of 1±0.03, or you should replace the instrument. You should calibrate the instrument as per the operation frequency.
 - 3. For standard liquid with known kinematic viscosity, the difference between the measured value and calculation value of flowing time should be within ±3% of the calculation value.

III. Principle and calculation:
The viscosity measured by the instrument is specific viscosity. The specific viscosity is expressed as the elapse time of a certain quantity of sample flowing out from an effuse hole of stipulated diameter under a specific temperature. It is indicated by second. You can use the following equations to convert the flowing time of sample (s) into kinematic viscosity (mm²/s).
 $t < 23 \text{ s}, t = 0.154\mu + 11$
 $23 \text{ s} \leq t \leq 150 \text{ s}, t = 0.223\mu + 6.0$
Where:
 t = flowing time, s
 U = kinematic viscosity, mm²/s

KJMC-I Decapper for Vacuum Blood Collection Tubes

Summary:

- * It would be simpler and more convenient by using the automatic machine to reduce medical staff's labor intensity and improve the work efficiency.
- * Effectively avoid being infected by skin scratch when the staff open the cap of cracked glass tube by hand.
- * Due to the negative pressure inside the tube, too much force during the cap opening will cause blood spatter. The machine successfully solves the danger of cross infection and avoid the trouble of frequent hand washing.
- * Radically preclude the danger of potential biological contamination caused by residual aerosol inside the tube during manual operation. Meanwhile, it is highly meaningful to bio-safety.

TS series Electric Stainless Steel Distilled Water Equipment (hanging type)

General: This device can be mounted on wall, and producing the distil water in lower cost, continuously, automatically and effectively. Operation: The tap water enters the bottom of the condense pipe and circle along with the pipe and enters the vaporize pan in the end, the height of the overflow be pre-set. The steam in the pipe go down and meat the water go up, thus to make the gas in it. The steam produced in vaporize pan reached the condense pipe through guide plate. The guide plate be installed as can change direction three times before the steam enters the condense pipe. This way can protection of bring tap water in the distil water, the tap water bring in the distil water is the main cause of chemical of distil water worse. If the working is normal, it can get the water of fyrogen-free. The vaporize, condense, overflow and guide plate inner are made in stainless steel. And the cover outside and the cover of guide plate are made in heat-resistant borosilicate glass, all the electric elements with safety cut off switch. The unit construction by Vaporize pan, cooling pipe, condense pipe, overflow and guide plate inner etc. Principle: Filling water~Heating~Vapor~Condense~Distil water

J-2 Colony Counter

This Colony Counter is a semi-automatic digital displayer for counting the germs, which consists of counter, sensor, counting cell etc. The counter is made of CMOS integrated electric. In the black longitudinal background counting cell, a circular fluorescent lamp is used for side lighti ng, which can give a clear colony comparing. The monitor is designed as three-figure number according to the requirement for bacterial counting SOP. When the colony in one culture plate is over 300, dilute the sample and redo the operation in order to ensure the accuracy of the counting. This instrument can reduce the labour of the operator, enhance the efficiency and working quality, which can be widely used in the field of foo lstuff, beverage, drugs, biological products, sanitary utilities, drinking water, industrial waste water and clinical sample. It is a necessary instrument for all levels of health and epidemic prevention stations, environmental monitoring stations, food sanitary supervision organizations, hospitals biological products manufacturers, medicine inspection stations, foodstuff companies, chemical industry, institutions, and research centres.

J-3 Colonometere

Summarize: The Bacterial colony counter is a digital displayer for counting the germs, it is made of counter, pen, counting cell. The counter is made of CMOS integrated electric, LED Nixie tube. The word high is 15mm (6"), it is clear and brightness, work in private use pen, it is sensitive and accurate, there are two kinds of light source, and it is adjustable.

There are lights in the counting cell, it is clear of colony parallel. It is Convenient to observe. Could be adjusted by pressing “-“ or “+”. There is alarm to ensure counting correct. The number is 0-999. If need to restart, could press “reset” key. The magnifier can be adjusted to suitable position with flexible arm. The magnification is up to 3X. This equipment could less the experimenter's labor intensity, increase the efficiency and quality. It is widely used for bacilli inspection of food, drink, medicine, biological, make-up, health products, Water for drink, domestic sewage, and industrial water. It is the required equipment of all kinds' health station, environmental monitoring centre, food hygiene, testing centre, hospital, Institute of biological products, laboratory for the control of drugs, Commodity Inspection bureau, the made-up factory, the laboratory of university and scientific research institutions.

Technology parameter:

The volume of LED: 0-999

The height of the word: 15mm (6")

Light power: 12W (Min.) 28W (Max.)

Total power < 50W

Colony center diameter: ϕ 155mm

Suitable Petri Dishes: ϕ 50- ϕ 150mm

Dimension: 360*300*180mm Weight: 4.3KG

Have the function of counting in bidirectional Caxial lighting, 3 times enlargement, 9 times enlargement.

The way to use: Connect the pen to the equipment, turn on the switch, and put the Petri dish on the white panel. Use the pen to count the colony on the surface of Petri dishes. There is color where have been counted, and if there is buzzer, it shows the counting is effective. The number on the display screen would be added automatic, check carefully with the magnifier, confirm all the dots have been counted. (If there is any miss, could use the key press of manual to count, LED show the quantity. After finishing counting, record the quantity on the paper, then recount again, compare with the number with the first time, if the quantity is same, the result would be more accurate. Get out the Petri dishes, after recording, press “restart”, the screen would be back to initial status.

Bacti-cinerator Sterilizer

The Bacti-Cinerator sterilizer sterilizes microorganisms utilizing infrared heat produced by a ceramic core element. The ceramic element contains no asbestos and ensures maximum sterility without splatter across the work surface area. Complete sterilization occurs within 5-7 seconds at optimum sterilizing temperature of 1500°F (815.6°C). The small footprint makes the Bacti-Cinerator sterilizer an ideal instrument for anaerobic and aerobic chambers alike.

HN200 Sample Concentrator

Product Introduction:
Hn200 Sample Concentrator is mainly used in the concentration of samples in batches, such as drug screening, hormone analysis, liquid/gas phase, as well as mass spectrum analysis.

Working Principle:
* Blowing the nitrogen into the surface of the heated samples, so that the dissolvent in the samples can be evaporated and separated quickly, which comes up to the oxygen-free concentration and keeps the higher pureness of samples. * The use of sample concentration instead of the commonly used rotary evaporimeter for concentration, can have simultaneous concentration of dozens of samples, which makes the sample preparation time greatly shortened, and has the advantages of time-saving, easy operation and fast.

JSQA Hemocyto-meter

Hemocytometer is a microcomputer calculator integrated with counting, analysis and monitoring with ten groups, two's place and ten carries.

The number is calculated with ten keys and showing ten groups of numbers and totals at the same time. Press “%” button, the device will display all group data integer digit, press again will display all group data decimal digit(the light is on). It is of accuracy, functional stability, good out shape, convenient for use and clinical fit, showing the primary bacterial infection or virus infection. Especially fits for the small and middle size hospitals.

Instruction:

- 1. Prepare with connected the electricity , turn on the power and“0”is showed on the monitor , then push the “Reset” key, clearing all the data to
- 2. Then, the instrument will show normal eight data with their eight keys correspondently such as Basophilic(BASO) , eosinophilic(EOSIN) , MYELO , JUVEN , Neutrophilic stab granulocyte(STAB), Neutrophilic segmented granulocyte (SEG), lymphocyte(LYMPH) and Monocyte (MONO).
- If you want to count any data, please push the relative key.
- 3. The others out of the above-mentioned data, customer can define it by himself with the “9”and “10” key.
- 4. Each key will sounds “toot” meaning the counting is available and adding “1” in the corresponding calculator while the “Σ” meaning adding “1” for total. If no “toot” is heard, the counting is not working.
- 5. When the simplex is full will display “99”, will hear a longer time “toot”, stop accumulated , other key will go on accumulating, when the total is accumulated to “990” , the counting of this operation is full. As soon as you hear a longer time “toot”, the counting is not working.
- 6. While you want to finish this operation, please push the key “%” , after hearing the “toot” ,the computer will change the values into percentage on the monitor the total does not change.. If you want to get a more accurate value, push “%” again, it will show the percentage to decimal. (the light is on), (only when the single channel is accumulated, push “%” key showing “-” , it means the total calculator showing the single channel value and percentage is 100%).
- 7. When the operation is finished, please push “Reset” key, the ten groups and “Σ”return to “0” , then you can start another calculation.

SOX500 Fat Analyzer

SOX500 Fat Analyzer, designed based on the Soxhlet extraction principle, is an automatic crude fat analyzer in which weight method is used to determine the fat content. Five extraction methods and four function. SOX500 Fat Analyzer boasts such five extraction methods as Soxhlet standard method (national standard), Soxhlet thermal extraction, thermal extraction, continuous flow and Soxhlet CH standard thermal extraction for user option, and such four automatic functions as extraction, leaching, solvent recovery and pre-drying. It's designed according to our investigation over 3000 users, well catering for user demands. Powerful temperature control capacity Safe and eco-friendly.

Characteristics:

1. Colorful and pleasing touch screen with concise interface design and external small-size operation panel provide easy operation and save space.
2. Five exclusive extraction methods are at your option.
3. Test process can be suspended or resumed at any time, offering flexible control.
4. One-piece metal bath heating gives quick, uniform, stable and safe temperature rise.
5. Wide scope of temperature control, applicable for the organic solvents with different boiling points.

Cell

Cell

We formed 12 series, 300 different kinds of cells and optical cells, which apply to photo electrons, optical spectrum analyses in industries of chemistry, metallurgy, environmental protection, medicinal tests, hospitals, power stations, water works, scientific research institutions etc. Many world-famous optical spectrum works chose our products as necessary accessories of theirs.

The Transmission features of our cell guaranteed transmission values on empty cells and deviations in matched set.

VACUUM BLOOD TUBE

Vacuum Blood Tube

Vacuum Blood Tube Products' Characters Products' Characters

1. All the vacuum tubes are produced in the clarification plants and their wall are cleaned by ultrasonic waves and washed by the deionized water, sterilized by cobalt 60 radiation, while the inner wall are siliconized, produced in clean room which prevent the foreign particles coming into the products effectively.

2. The tubes adopt the double covers design and are well sealed by the medical-purpose butyl disks which ensure a stable vacuum in the product's validation period. The internal sides of the tubes are coated with the lubricant, and outside are sleeved with plastic safety caps which make the opening and shutting much easier. The sideways opening style can prevent the blood splashing and pollutions.

3. The tubes adopt the international general colored caps, which is easy for identification, selection and classification, and can prevent the mixing and mistakes occurring during the operations.

4. Use the PET tubes are produced according to the international norms with good compatibilities and suitable of varied chemical and biological analysis, immunochemistry, and blood testing. The materials are of lightness and firm that can bear 5000g centrifugal acceleration and has the characters of easy for transportation and processing which make the immediate direct high pressure sterilization after use or destroying possible without any poisonous gas emitting and environmental friendly.

5. Using the US produced coating equipments and technologies, which make the additives evenly coated on the walls for avoiding the mis-inspection and re-inspection.

6. The vacuum room can maintain the status 24 months to ensure the accurate blood sampling dosage. Different kinds of vacuum level tubes are for your choices according to the temperature and sea levels.

7. According to the requirements of the customers, we can supply the double labels tubes and strip code tubes to ensure the patients test accurate and convenient for the renew of the hospital management system.

Description:

In recent years, due to the rapid development of clinical testing methods and progress on the automatic analytical instruments, the customers make more requirements on the blood sample collection system not only safety but also accurate, easy for operation, products quality and can preserve the sample's original characters, the blood storage time.

Inducing the wholes sets of vacuum blood tube producing lines, We are advocating to the R&D and manufacturing vacuum blood tube on the shoulder of the mature blood collection technologies from abroad. We have innovated the methods and used the special accurate instruments to control the critical aspects affecting product's quality, such as the process of tube wall, vacuum tightness, loadability of separation gel and dosages. Our vacuum blood tubes are more safety, simpler, more accurate and more economical which can meet different requirements of the medical care persons and research and development personnel.
