

This instrument is an intelligent pH meter controlled by microprocessor. It is made of high reliable imported integrated components and refined by strict screening. Its performance is stable, reliable and easy to operate. It is suitable for precise measurement of the acidity (pH) and electrode potential (mV) of the solution in the laboratory. It is widely used in the electrochemical analysis of light industry, chemical industry, pharmacy, food, epidemic prevention, environmental protection and education scientific research department.

Basic and buy

1. E201 – C – L glass PH composite electrode (suitable for solution temperature range of 0-80 $^{\circ}$ C)

2. Temperature electrode (only suitable for solution used in the 0-65 °C)

PH calibration sample

Power adapter E201 -c molded case PH composite electrode (suitable for 5 to 60 °C solution temperature range measurement) PH calibration sample

Power adapter

E201 – C – L glass PH composite electrode (suitable for solution temperature range of 0-80 °C)
Temperature electrode (only suitable for solution used in the 0-65 °C)
PH calibration sample
Power adapter
