

PHS-3E MICROCOMPUTER TYPE PH METER

This instrument is an intelligent pH meter controlled by microprocessor. It is made of high reliable imported integrated components and refined by strict screening. Its performance is stable, reliable and easy to operate. It is suitable for precise measurement of the acidity (pH) and electrode potential (mV) of the solution in the laboratory. It is widely used in the electrochemical analysis of light industry, chemical industry, pharmacy, food, epidemic prevention, environmental protection and education scientific research department.
